Name: Avdesh Dubey	City: indore
Organisation: Individual	Country: india

Starting date of project actual is 27/02/2003. The project will start from 1/11/2007.

The project is based on four number of the 5000 TPD sponge iron kilns which operate on washed coal, to generate 45 MW WHRB power, which stated in July 2005.

The barriers claimed in the PDD are mainly for sponge iron plants. The CER calculations show that the project has fairly high PLF and with the supporting steam from two AFBC the project is not likely to face any technology barriers financial or investment. The 500 TPD plants are reported to operate smoothly based on the washed coal.
