We have studied PDD of proposed CDM project of Sajjan India Ltd. Following are our comments

- It proposes replacement of conventional coal with Natural Gas which enhances air quality. It is good step towards reduction of GHG. But in same state of Gujarat on other hand, State Govt. and Ministry of Environment & Forest (Nodal agency of CDM in India) has permitted 4000 MW coal based power plant. This plant will emit such large amount of GHG that this small efforts may not resulted as shown.
- Natural Gas will be provided by Gujarat Gas Company Ltd. Whether it is provided with existing network or any modification is needed? Whether any contract between SIL and GGCL has done for providing NG up to 10 year without any interruption?
- We would like to have copy of comments received on this project in local stakeholder's consultation. Also where and when the consultation was held? Please furnish copy of State Pollution Control Board Consent to Establish and Consent to Operate.
